

# Server and Desktop support

In today's complex business environment companies are faced with continuous technology and industry changes that are directing increased pressure on IT departments and associated budgets. IT professionals have to be flexible enough to be able to react to these changes quickly and efficiently to ensure that networks remain operational. Computer Communications offers their clients with a full range of Server and Desktop support services that can be utilised to fulfil their ever changing network requirements.

## Experienced hands

Refined from many years experience in the Server and Desktop support arena Computer Communications have customised a dedicated range of installation, maintenance, solution design and consultancy services across a wide range of leading Server and Desktop devices.

This knowledge and expertise is a resource made available to all our clients to ensure they can meet their ever changing network requirements. Computer Communications has the necessary staff across Service Support, Service Delivery and Professional Services to respond to all types of Server and Desktop incidents and requests.

## Server support

Computer Communications design, install and maintain leading edge Server systems installations across all kinds of vertical markets on behalf of their clients. Security, availability and stability is recognised as critical criteria when delivering any level of Server support from installation, configuration, design and support as we realise the importance of this element within any installed configuration.

Computer Communications are able to provide support and maintenance across legacy, current and emerging products and technologies which all form a substantial part of Computer Communications's support base today. Wintel through to enterprise such as low end Prolights to high end SUN and storage equipment are all supported and maintained under the Computer Communications support portfolio.

## Desktop support

Desktops are very much an integral part of all businesses these days with many being set up to be the access point to much more complex underlying business systems and applications. Just like with these critical systems it is important to have the necessary levels of support in place should anything go wrong with your Desktop environment. This is where Computer Communications can really make a difference with their comprehensive infrastructure of Desktop services that provides elements that include full incident lifecycle around hardware break/fix and install's, moves and changes.

## Benefits of partnering with Computer Communications:

- > Highly qualified teams of support engineers
- > 'Return to service' - up to latest back up
- > Rapid Response Team for critical support options
- > Latest and up to date accreditations
- > One single SLA or SLA's to suit
- > Multi-vendor, HP, Dell, Toshiba, VMware, Sun, IBM
- > 24/7/365 Service Desk
- > Up to 2hr response time

### Service desk

With increasing business process and the dependency on IT services and IT infrastructure, it has never been more important to ensure that changes to the infrastructure are managed with minimal impact to the installed estate. What's more, you need a detailed understanding of the business impact of an outage as well as the ability to control the process to execute upgrades and changes flawlessly and maintain service availability and service performance to the agreed levels.

Computer Communications Service Desk is a comprehensive, scalable IT Service desk designed to provide a 24/7/365 support service to their Customers. Using the Computer Communications Service Desk ensures you can easily streamline IT service processes as well as manage the IT service life cycle through comprehensive service level management capabilities. The Service Desk also provides effective controls for your critical service support and service delivery processes.

### Coverage

Providing support to Customers across the whole of the UK and Ireland with strategic support resource throughout mainland Europe ensures that Computer Communications continues to be the number one choice in network support. The depth of support across these areas also enables Computer Communications to provide very competitive response and break/fix times on all SLA's no matter the location or technology type. Being vendor independent with a wide range of leading vendor accreditations means all Computer Communications's Customers can utilise a vast resource of technical skills and knowledge base.
